Choose your article type

The journal welcomes papers that fall into one of the following categories:

- **Original papers** (up to 10000 words, all included) – standard articles based on theoretical or empirical research, providing a clear discussion of results that extends beyond a single case study.
- **Regional reviews** (up to 10000 words, all included) – reviews with a specific thematic and regional focus (typically covering a region consisting of several countries), offering authoritative summaries of the state of the art and outlining future research and practice challenges. Bibliographic reviews not meeting these requirements are rejected from the evaluation.
- **Discussion papers** (up to 6000 words, all included) – contributions offering critical and authoritative perspectives on recent issues and methodologies.

Key principles for preparing your manuscript

- Keeping the below principles in mind will help us to maintain the open-access status of the journal. There are **no submission, processing or publication charges** for authors publishing in GeoScape journal.
- **Formatting** – Keep formatting as simple as possible, with both editors and readers in mind. Excessive or complex formatting may cause issues during manuscript processing.
- **Your manuscript, your way** – You may use either British or American English and choose among standard reference formatting styles. However, completeness and consistency are strongly required.
- **Initial submission** – Submit **a single editable file** (**up to 5 MB**). As all manuscripts undergo an initial editorial evaluation by field editors. There is no need to provide separate files for text, figures, and tables at this stage. Tables and figures may be embedded directly in the manuscript, provided that all elements remain clearly readable.
- **Revising your manuscript** – Once the manuscript has been reviewed and you are invited to submit a revised version, a fully itemized submission is required. This includes providing separate files for all components with tracked changes, along with a detailed, point-by-point response to the comments from the editor and reviewers. Licence Agreement should be submitted no later than with your revision.

Cover letter

The cover letter should be included directly in the body of your email message. It must state the title of the manuscript and confirm that the submission represents your original research and is being submitted exclusively to *GeoScape*. Authors are invited to suggest two potential reviewers for their manuscript; however, the editorial board reserves the right to make the final selection of reviewers.

Manuscript structure guidelines

Title: no more than 20 words

Authors: full names, full affiliations, ORCID numbers (if applicable), institutional e-mail contact to corresponding author

Abstract: 100–200 words, explaining what challenge does your research address, what methods and data were used, what are the main results and their implications.

Key words: 3–5

Highlights: 3–5 highlights (bullet points)

1. Introduction

The sections can include subsections up a third level, i.e. 1.1 and 1.1.1.

In this section, you should clearly introduce the aims of your research, outline the broader context related to the topic (rationale), and declare your research goals and research questions or hypothesis. Relevant literature should be cited appropriately, for example: *as discussed in Turner and Gardner (1991, eds.)*. This issue has been addressed in several studies (e.g., Schumm, 1994).

The manuscript can feature **up to 10 (altogether) Tables** and **Figures** (do not use „Map“, „Graph“, „Plate“ or other labels). Each Table and Figure should be referred to from the text, include a self-explanatory caption, and source of data.

Figure – Example 1

Must be clear with good **resolution**.
Use **sans-serif** fonts.
Do **not use frames** to all components in the map
Keep the **north arrow** and **graphic scale** simple.
Include **explanation** to symbols but avoid “Legend” label.
If there are more maps in the Figure, use letters (A, B, C …) for reference in the caption.
For **colour schemes**, you may consult https://colorbrewer2.org/#type=sequential&scheme=BuGn&n=3

Figure – Example 2

Must be clear with **good resolution**.
Use **sans-serif** fonts.
If there are more photos in the Figure, use letters (A, B, C …) for reference in the caption.
Do not use 3d graphs or pictures with **special effects**, keep lines simple and black.

Table – Example

Country	Population (millions)	Urban (%)
Norland	46.21	68.5
Estovia	45.74	54.2
Caldria	22.77	72.1
Virelia	3.78	61.0

Use **decimal dot**, align numbers **to the right**, use the same **number of decimal places** in each column.

2. Data and Methods (may also include Case study characteristic)

In this section, you should describe the study area (if applicable) and present the data and methods used to obtain the research results. The methods should be described in sufficient detail to ensure a clear understanding of how the data were collected and analysed, and to allow for full replicability. Equations should be editable and numbered.

3. Results

In this section, you should present your results in a clear and primarily descriptive manner.

4. Discussion

This section should provide an interpretation of your results in the context of the current state of the art. Compare your findings with existing literature and discuss their significance. You should also address any methodological limitations and their potential implications, including uncertainties. Insufficient attention paid to Discussion is among the main reasons for desk reject during the initial editorial evaluation.

5. Conclusions

Finally, summarize the key findings of your research and outline their broader implications and possible future research directions.

Funding

State whether the research has received any funding. If so, provide relevant details.

Acknowledgement

Acknowledge any support received in the course of the research (e.g., informants, technical assistance, or non-author contributions).

Conflict of Interest

Provide a statement disclosing any financial, personal, or professional relationships that could inappropriately influence the research. This statement is typically included at the end of the manuscript.

Author contributions and the use of GenAI

Specify the contributions of each author to the preparation of the manuscript, as well as the extent to which Generative Artificial Intelligence (GenAI) tools were used. Please note that the listed authors bear full responsibility for the content and claims presented in the manuscript.

References

You may use APA or another standard referencing style, but consistency is required. Ensure that all necessary information for identifying the sources is provided. References should be listed in alphabetical order by the surname of the first author. Include DOI where available.
