

**Journal of Translational Internal Medicine**  
**Call for Paper for Special Issue: Pulmonary Hypertension and Right Heart Function**

Pulmonary hypertension is a series of complex cardiopulmonary disorders, which is characterized by persistent and progressive right heart dysfunction. More and more researchers and clinical experts pay attention to this field, increasingly pathogenesis has been clarified. The adaptation of right ventricular function is a vital determinant of the prognosis. In recent years, new drugs and therapies have been emerging, bringing new hope to these disorders. The purpose of this special issue is to review the latest research results of pathogenesis, diagnosis and evaluation, intervention and treatment of pulmonary hypertension.

**Requirements for Manuscript Submission**

In this Special Issue, we hope to include articles of various kinds such as perspectives, original research, reviews, commentaries and letters focusing on but not limited to the following topics:

- 1 Epidemiology of pulmonary hypertension
- 2 Pathogenesis of pulmonary hypertension
- 3 Diagnostic methods and criterions of pulmonary hypertension
- 4 Current status in the diagnosis and treatment of different types of pulmonary hypertension
- 5 Translational medicine study on right ventricular dysfunction in patients with pulmonary hypertension
- 6 Rehabilitation of pulmonary hypertension
- 7 Prognostic evaluation of pulmonary hypertension

All manuscripts for the Special Issue should be submitted online at: <https://www.editorialmanager.com/jtim/>. Please stress "Special Issue" in the Cover letter. Please visit the official site at: [www.inern-med.com](http://www.inern-med.com), and enter "For Author" for detailed instructions.

**Deadline:** 2021-10-31

## Guest Editor Introduction

### **Zhenguo Zhai M.D., Ph.D.**

- Professor and Chief Physician of the Pulmonary and Critical Care Medicine Department, Respiratory Center, China-Japan Friendship Hospital, Beijing, China
- Head of the Pulmonary Embolism and Pulmonary Vascular Diseases Study Group
- Head of the National Program for Prevention and Management of Pulmonary Embolism and Deep Venous Thrombosis executive office

### **Jason X.-J. Yuan M.D., Ph.D.**

- Professor and Director, Section of Physiology, Division of Pulmonary, Critical Care and Sleep Medicine, Department of Medicine, University of California, San Diego

### **The Special Issue is academically supervised by:**

National Program for Prevention and Management of Pulmonary Embolism and Deep Venous Thrombosis executive office

Expert Committee on pulmonary embolism and pulmonary vascular disease, National Respiratory Medical Center

Pulmonary embolism and pulmonary vascular disease group, Chinese Association of Chest Physicians

Pulmonary embolism and pulmonary vascular disease group, Chinese Thoracic Society

## **Journal Description**

Journal of Translational Internal Medicine (JTIM) is devoted to promoting science and practice in translational medicine and internal medicine in the world. To this end, JTIM publishes articles from all areas of internal medicine. The journal publishes original articles, rapid communications, editorials, reviews, highlights, perspective and other information closed relevant to translational medicine, internal medicine and related fields. Other types of articles include advanced experience, ideological highlights, and Q&A from scholars and scientists in related fields. JTIM will also launch Special Issues in rapid response to the newest development directions of scientific research fields. This journal is indexed in SCIE (IF 3.451), PubMed Central, Scopus, DOAJ, etc.

JTIM has the ambition to and will become the EXCELLENT international platform for the publication of outstanding studies from all over the world. JTIM is designed to report research progress and the most recent findings in Translational Internal Medicine field, accelerating successful transformation from basic research results to clinicallypractical theories , diagnosis and treatment techniques, methodologies and drug discovery. With the aims of health care delivery and policy making, JTIM will help to best balance benefits, qualities, and costs of medications. At JTIM, we have a challenging mission: to improve the quality of human life and enable people live longer by facilitating disease prevention, treatment and eventually the CURE.
